BespokeBoxx Web Application

Description

This is a fully functioning web platform template where products can be shown, browsed, put in cart, bought, user created, and make online payments. There is an admin dashboard where the merchants can login to monitor the orders, customers, etc. The system also includes an integrated stripe payment system (just replace dummy details with your own stripe account).

The backend is developed in PHP and MySQL database. The frontend is in HTML, JavaScript and CSS.

There are also some external libraries such as jquery, animate.css, bootstrap and etc.

Php and mysql server is needed to run the website.
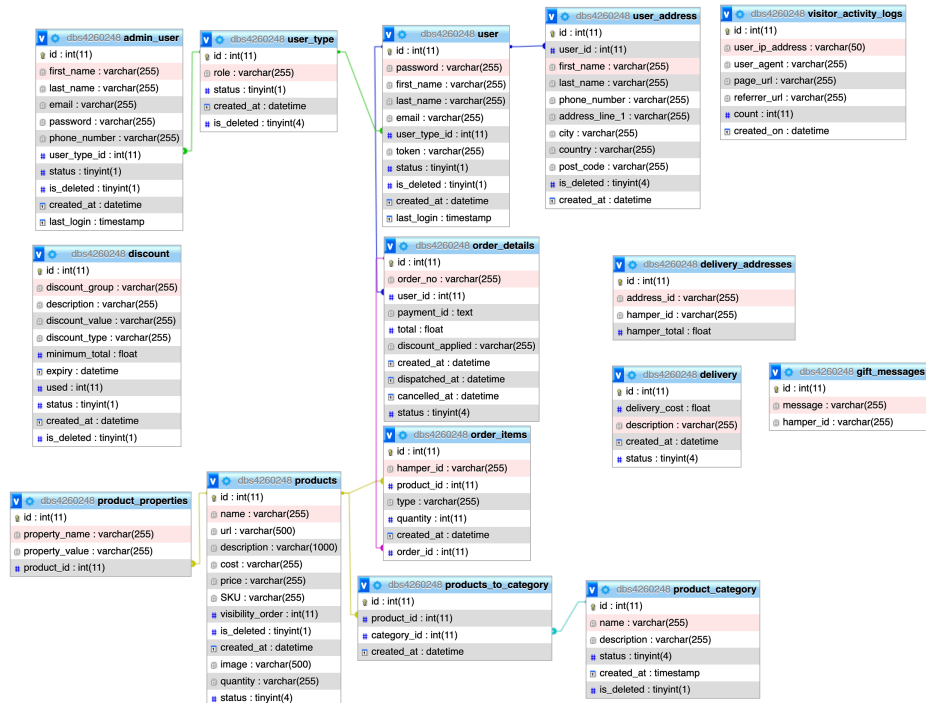

Limitations

- *Need to add a stripe account details for online payment system*

- *Need to modify the shopping method*

    - *Currently you can create a custom hamper to add to cart*

    - *Need to make it so individual products can be added to cart*

Access to admin Details

To login to the admin side add a record of email and a hashed password to the admin_user table.

Database

A sample database has been added to the files.
